

REQUEST FOR INFORMATION - DRAFT

RFI number: SG-669386B6

Project: Asterquay Learning Workshop

Owner: Lumaquay Community Fabrication Authority

Submittal ID: 669386b6384e4ab6aad9f2ee5263db5a

Run ID: 669386b6384e4ab6aad9f2ee5263db5a

Date issued: 2026-08-22

Findings in this draft: 1

This runtime uses the audit run identifier as the submittal identifier, so those two fields carry the same value.

DRAFT - HUMAN REVIEW REQUIRED

This draft presents quoted text anchors for review. It does not establish that any finding is accurate.

FINDINGS - QUOTES VERIFIED

Both quotes were found at their cited pages. This is not a judgment that the discrepancy is real. Every quote below was located on its cited page by the verification gate, once when the finding was written and once again before this page rendered.

Claim	Specification quote	Submitted quote	Severity
The specification requires a 480V, 3-phase distribution switchboard, but the submitted cut sheet specifies a 208V nominal system.	Page 3: "Provide a 480V, 3-phase distribution switchboard for service distribution."	Page 1: "Nominal system: 208V, 3-phase, 4-wire."	UNCLASSIFIED - status: fallback - reason: severity endpoint not deployed outside demo windows

Severity is an advisory annotation applied after verification. It is not a compliance determination and it changes no verification status.

TEXT-LAYER INTEGRITY SCREEN

Both documents were screened for text that the PDF render mode keeps off the visible page. A flagged document stops its run before any model call, so a document listed here as flagged could not have produced this draft.

Document	Screen	Pages read	Result
specification	text_layer_integrity_v2	7	Clean: no detector flagged this document.
submitted document	text_layer_integrity_v2	2	Clean: no detector flagged this document.

CHAIN-OF-CUSTODY METADATA

Specification document SHA-256: 88988353d0332a32c3dcdf47225e150814a92277beb920cdfc919de9d3dfe568

Submitted document SHA-256: 8c3109b8ef690dd2c51de6fa3efacedcdcbc6da6df582c138c504f82b2155a385

These hashes identify the source byte streams used for this run. They are chain-of-custody metadata only. They do not prove accuracy, and no part of the verification gate reads them.

REVIEW

This draft is not issued until a human reviewer signs it. SpecGuard signs nothing.
